ABSTRACT OF THE DISCLOSURE

The proposed invention is an apparatus and method that enables video communication through a studio that is placed in a public location whereby a studio user records a performance, presentation, or an interview. In one embodiment, information seekers with special interests may view interviews or presentations recorded by studio users pertaining to subject matter relevant to that special interest. In one embodiment, a performance is recorded and uploaded to the Internet where the general public locates and views the performance. In an alternative embodiment, the performance is rated.
